EXPERIENCE

Peek, San Francisco, CA— *Software Automation Engineer*
📅 March 2021 - August 2024 | Remote

- Designed and maintained automated test scripts, increasing daily deployment efficiency by 40%.
- Collaborated closely with product managers and developers to implement a Shift Left testing strategy, reducing defect resolution costs and efforts.
- Developed and executed comprehensive QA test plans for feature validation.
- Conducted regression testing and automated test suite execution to accelerate diagnostics.
- Reproduced and tracked bugs, ensuring timely resolution across development cycles.
- Managed deployment processes, ensuring smooth transitions from lower environments to production.
- Maintained up-to-date test scripts and cases in alignment with evolving Requirements.

Genalyte, San Diego, CA — Software Quality Assurance Engineer
📅 January 2020 - January 2021 | Remote

- Reviewed user requirement documents to ensure testability.
- Designed and maintained test plans and test cases based on functional requirements.
- Executed exploratory, smoke, functional, and regression testing both manually and through automation.
- Developed UI automation scripts using Selenium to enhance test coverage.
- Performed API testing and validation using Postman.
- Monitored bug resolution, validated fixes, and provided developers with
- actionable QA insights.
- Analyze software features for functionality and compatibility pre-deployment.
